The terms are consistent with our discussions. I think we are ready to go forward.

Hi Scott,

Here is a complete document of the access conditions. This version should include all the agreements we discussed. Please review and let us know if this is your understanding as well. We are looking forward to working with you and Range as we conduct our case studies.

Jeanne

Subject: access conditions

Hi Scott,

I enjoyed meeting with you this week. Here is the electronic copy of the revised access conditions which I expect will meet the goals we discussed. Please let me know if you have any questions.

We are taking a look at the air monitoring and modeling proposal you shared to see what might be of interest in this area.

In addition, we are interested in seeing if we might obtain samples of flowback and produced water from a variety of Range's sites. The samples would be used to help us develop analytical methods that are robust in the typical matrices associated with flowback and produced water. We would also use the samples to help us better understand the treatability of the wastewaters. A general description of the work may be found in our study plan. I would be pleased to discuss with you how we could work together on these items.

Finally, we very much appreciate your offer to host EPA folks to tour Range's operations related to hydraulic fracturing. I'm working with my colleagues now in order to propose a few dates for your consideration.

Best,

Jeanne
